Bogdan Branzaniuc

Junior Full Stack Software Engineer

Professional Summary

Who am I ?

I am someone who wants to start his career in Software Engineering as best as one could, being about making the best possible exchange of value between me and those who tutor I grew up in a beautiful country named Romania, but out of professional, peace of mind reasons I moved to Dublin on 13.th of August 2021.

Why Software Engineering?

My first encounter with understanding software felt struggling to open a door in the dark and suddenly hearing the noise of the key perfectly into the lock.

I instantly felt in love with the power of abstraction, I realized I could be part of something that can solve the problems of a billion while developing myself in the process.

My current goals

I. to be all the time surrounded by smarter people than me.

II. to build working solutions to the most difficult problems among the brightest minds.

III. to enjoy myself in the process and create high-quality interactions.
